

Cosmetic Dental Questions Ask Dr. Bader:

Dear Dr. Bader:

I have really crooked upper front teeth. What choices do I have to fix them?

Crooked teeth can be treated several different ways. First, I review **your goals** for the finished result. Do you like the color and shape of your natural teeth? Do you have a bite problem? If your natural teeth are just straight-

ened will the finished result be beautiful? Then I take models, photos and measurements. I can create a **digital simulation** of your finished smile and a **3D wax model** for us to evaluate. Last, we review the information and your individual treatment options. **Invisalign** braces can straighten your natural teeth. Sometimes regular braces are necessary. If you are dissatisfied with the look of your natural teeth, or if you have large fillings, **porcelain veneers** can often be used to straighten the appearance of your teeth and give you a beautiful shape and color. My website has some **great before and after photos** of crooked teeth. I do **Invisalign** orthodontics in my office. You do not have to live with a crooked smile any longer! **Call me today for your personal evaluation.**

Cosmetic Dental Questions Ask Dr. Bader:

Dear Dr. Bader:

I am finally ready for a Smile Makeover. How do I choose a Cosmetic Dentist? Are they all the same?

Since there is no real specialty in Cosmetic Dentistry, it is important to do some research. **Training** and **experience** are critical. Very few Cosmetic Dentists have **hands on training** where they treat real patients with the latest techniques. Cosmetic Dentistry cannot be learned in a lecture. The **Las Vegas Institute (LVI)** is one of the top hands on training programs for cosmetic dentistry. Their programs allow the dentist to solve problems from very simple to the most complicated. I have completed every program available at LVI in Cosmetic Dentistry and aesthetic bite reconstruction. **Before and after photographs** of beautiful smiles are one good way to judge experience. Be sure the photographs are the dentist's actual patients! My website has some great examples of close up photos showing porcelain veneers and bonding for front and back teeth.
